[Project Title]

1. PROJECT OVERVIEW

Team Members

- [Name — URI email]
- [Name — URI email]
- [Name — URI email]

TA or Instructor Consultation
[Name of the TA or instructor consulted, and when the discussion took place.]

GitHub Repository
[GitHub repository URL]

2. PROBLEM AND MOTIVATION

[Describe the problem the project will address and why the problem is interesting or worth solving.]

3. PROPOSED SOLUTION AND DATA STRUCTURE

[Describe the application and the advanced data structure(s) your team will implement in C++. Explain the main idea and why the chosen structure fits the problem.]

4. BASELINE AND EVALUATION PLAN

[Describe the baseline implementation you will compare against, the input data or test cases you will use, and the measurements you will collect (for example, running time, memory use, or number of operations). Explain how you will vary input size and present the results.]

5. PLANNED DEMONSTRATION

[Describe what the finished project will do and what you plan to show in the live demo, including how the application will make the data structure's advantage visible.]
